

CASE STUDY #1: SUBSCRIPTION MODEL REDESIGN

Business Operations + Revenue Model Transformation

Company: Top Synergy Management Phils. Inc. (Green Crew House Cleaning Services)

Role: Sales & Marketing Officer

Timeline: May 2023 – Feb 2024 (10 months)

Status: Completed | Results: 72% adoption, 50% revenue increase, structural shift to recurring revenue

CONTEXT

Top Synergy Management operated Green Crew House Cleaning Services in San Juan City, Philippines—a commercial cleaning business serving restaurants and food-service establishments across Metro Manila. The core service was deep cleaning for food industry clients: floor-to-ceiling sanitization, kitchen deep cleans, post-event facility turnover, and compliance-focused hygiene protocols.

The business operated on a one-off project basis: clients would call when they needed a deep clean (quarterly, semi-annually, or annually), we'd schedule the job, execute it, invoice them, and then wait for the next phone call. No predictability, no recurring relationship.

THE PROBLEM

The Revenue Unpredictability Crisis

When I started building our quarterly client activity reports in my first year, I pulled the previous year's data and calculated something shocking: **70% of our client base did not return for another engagement within the annual measurement period.**

The Calculation:

Started the year with ~100 active clients on our books. By year-end, only ~30 clients had booked another service. That meant 70 clients didn't engage with us again that year. $70 \div 100 \times 100 = 70\%$ **annual churn rate**

Why This Mattered:

For a cleaning services business, this was catastrophic: Revenue was impossible to forecast. Acquisition costs were eating margin. The business was fragile. The team was exhausted.

THE SOLUTION

Tiered Subscription Model

Three tiers with fixed monthly pricing and term discounts:

- **Starter Tier:** Monthly deep cleaning subscription
- **Growth Tier:** Bi-weekly or weekly scheduled cleanings
- **Scale Tier:** Custom recurring cleaning schedule

Term options: 3-month (no discount), 6-month (10% discount), 12-month (20-35% discount)

OUTCOMES

Quantified Results:

Metric	Result
--------	--------

Pilot Adoption (5 clients)	5 of 5 converted (100%)
Full Rollout (25 clients)	18 of 25 converted (72%)
First-Year Revenue	\$420,000 annualized
Churn Before	70%
Churn During Subscription	~5%
Renewal Rate	90%+
Revenue Forecast Accuracy Before	40-50%
Revenue Forecast Accuracy After	95%
Customer Satisfaction	8.5/10 (up from 7/10)

Business Impact Beyond Metrics: Revenue predictability changed everything. The founder could finally plan hiring without worrying month-to-month. Marketing could invest in content and thought leadership. Delivery quality improved because teams weren't burning out jumping from new project to new project.

KEY LEARNINGS

1. **Data beats assumptions** - I assumed clients wanted one-off projects. Data proved otherwise.
2. **Positioning can be more powerful than product** - We didn't invent new services; we repositioned existing capabilities.
3. **Pilot programs reduce risk** - When I proposed 'test with 5 clients first,' the founder felt comfortable.
4. **Operational clarity matters as much as strategy** - Clear processes and communication is what made the model work.
